Who Should Attend

Solutions Consultants · Solution Architects · Technical Consultants · Delivery Practitioners

Workshop Overview

The IFP 2.0 Delivery Partner Workshop is the hands-on technical program for Anaplan delivery practitioners. In short, self-paced sessions, participants master the full IFP 2.0 delivery workflow — from the App Framework interview-style configurator to model generation, error log review, and building customer-specific extensions.

Originally delivered with Elite EPM, this program reflects real delivery experience — including live questions, instructor commentary, and the judgment calls that define production readiness.

Objectives & Outcomes

- Configure the IFP App Framework for a real customer scenario
- Trigger model generation and monitor the 8,000+ object build process
- Review and resolve generation error logs with confidence
- Build customer extensions without breaking upgrade paths
- Apply the Anaplan Way methodology to IFP delivery engagements
- Load and validate data through the ADO pipeline

Intended Audience

Solutions Consultants

Pre-sales and solutioning for IFP opportunities

Solution Architects

Technical leads for IFP design and delivery

Technical Consultants

Practitioners configuring and extending IFP

Delivery Practitioners

Anyone on a team deploying IFP v2.0

Prerequisites

Anaplan platform experience (module building, formulas, lists) · Basic financial planning knowledge (P&L; balance sheet)
· IFP v2.0 workspace access required for exercises.

Format & Pace

Self-paced

1-2 hours per day on your own schedule. Work through the labs in any order, pause and resume as needed, and revisit material from a real customer engagement.

Labs & Exercises

LAB A · 60 MIN

App Framework Configurator

Configure IFP for FintechCo — 3 legal entities, multi-currency, 4 functional areas. Answer all 43 questions, set hierarchy levels, and trigger model generation. A real judgment exercise — no answer guide.

Hands-On · Core

LAB B · 45 MIN

Direct Input & Adjustments

Build a Direct Input method with two adjustment layers for FintechCo's OpEx module. Configure drivers, lock periods, and validate data flow through the ADO pipeline to the P&L;.

Hands-On · Extensions

LAB C · 45 MIN

Headcount × Rate Method

Extend Headcount with a rate-based planning method. Map employee grades to rate cards and validate outputs — without touching the base app.

Hands-On · Extensions

EXERCISE

Error Log Review & Resolution

Read, categorize, and resolve generation error logs. Covers the 5 most common error types and the fix-regenerate-verify loop.

Practical Skills
